

Thyroid Stimulating Hormone TSH and Thyroxine T4 Blood Test

What is a TSH and T4 test?

TSH is a hormone produced by the thyroid gland. T4 is a type of thyroid hormone.

The TSH and T4 test will help determine if your thyroid is working properly and making the correct amount of hormone your body needs.

What do results indicate?

If the thyroid gland does not make enough thyroid hormone it is known as hypothyroidism.

Abnormal results may also indicate a problem with your pituitary gland. The pituitary gland helps the production of TSH and T4.

How do I prepare for blood test?

Review your current medication list with provider. Some medication may interfere with the test results

Get a good night's sleep and drink plenty of water. Take prescribed medication as usual, unless directed by your physician to do otherwise.
